Report Generator

- First specify the path to the files in the reportcsv.py file

```python
obj1 = untangle.parse("/PATH/TO/THE/report1.xml")
obj2 = untangle.parse("/PATH/TO/THE/report2.xml")
obj3 = untangle.parse("/PATH/TO/THE/report3.xml")
xmls = [obj1, obj2, obj3]
```

- Navigate to the folder where the files are located from the terminal

- Install the requirements by running the command (This needs to be executed only once)

  ```
  pip install -r requirements.txt
  ```

- Finally run the following command to execute the script and generate the reports

  ```
  python reportcsv.py
  ```
